

Orasi DevOps Services: HashiCorp Certified

Partnership that Drives Performance

Orasi is a DevSecOps innovator, powering the acceleration, security, and adoption of software applications through automation. Our mission is to ensure confidence in the customer DevOps Journey. In partnership with HashiCorp, we provide solutions and services that offer full lifecycle support and integration to accelerate delivery of transformative applications. HashiCorp – the gold standard for multi-cloud infrastructure automation – is the go-to provider for cloud infrastructure automation in Orasi’s DevOps service engagements for customers leveraging large-scale, multi-cloud infrastructures.

Partners You Can Trust

As a HashiCorp partner, Orasi has certified teams, earning formal, industry-accepted credentials. Each HashiCorp certification program tests both conceptual knowledge and real-world experience using HashiCorp multi-cloud tools. These certifications ensure that customers are working with the most experienced and knowledgeable teams.

Our HashiCorp certifications include:

- Terraform Certified HashiCorp Implementation Partner (CHIP)
- Vault Certified HashiCorp Implementation Partner (CHIP)
- Vault Associate Certification
- HashiCorp Sales
- HashiCorp Sales Engineer
- Terraform Cloud for Business
- Terraform Associate

Better Together: Orasi and HashiCorp

HashiCorp empowers the world’s largest companies to deliver applications faster, helping organizations transition from manual processes and ITIL practices to self-services automation and DevOps practices.

Orasi’s dedicated consultants provide industry-leading insights into elite continuous delivery solutions, as well as leadership, coaching, and expertise to help customers optimize their investment in HashiCorp solutions.

Why Orasi?

Orasi implements and provides managed service DevOps solutions that drive faster, more predictable, and continuous delivery, all while improving quality. Our dedicated team of Advanced Technology consultants have achieved HashiCorp Vault and Terraform CHIP certifications. We have deep knowledge of deployment and maintenance of HashiCorp solutions in customer environments, including Day 1 (installation and configuration) and Day 2 (ongoing configuration maintenance) services. Our DevOps engineers understand the differentiation between HashiCorp's offerings of Open Source, hosted (HashiCorp Cloud Platform), and Enterprise for private deployment, and are skilled in working with HashiCorp's entire line of products to architect the customer stack.

Orasi in Action

Client Success: Orasi architects and implements new DevOps and software solutions for Global Edge Financial Services SaaS

Recently, the Orasi team partnered with a global edge financial services SaaS provider to architect and implement new DevOps and software solutions. The organization had experienced cloud provider outages that impacted their business for multiple days. As a result, they required a disaster recovery solution to mitigate the business impacts and wanted an evaluation of the VM-based architecture.

In addition to the disaster recovery and architecture improvements, the organization also wanted to enable an environment on-demand capability by implementing infrastructure as code to reduce their overall cloud costs. The Orasi team developed a

customized strategy and design, then shifted focus to iteratively implementing and executing on the design both for an environment on-demand and a disaster recovery solution using Azure for containers and Terraform to achieve high-availability.

By working with Orasi, the company received a proof-of-concept solution that provided a container-based solution with disaster recovery capabilities utilizing infrastructure as code, built the development plan delivering the new architecture, and initiated the build of the new platform.

HashiCorp – together with Orasi's strategic planning, implementation, and support services – puts best-in-class cloud automation in the hands of customers.

The Orasi Difference

Orasi is a DevSecOps innovator enabling the acceleration, delivery, and adoption of software applications and cloud infrastructure through automation. Orasi's services and solutions offer full lifecycle support and integration to ensure quality, security, and scalability of transformative applications.
