

SaltMiner Community

Pen Test Management and Reporting

SaltMiner Community Edition is the first freely available pen testing management and reporting solution capable of supporting unlimited users and results while also eliminating data format conflicts. It is enterprise functionality for manual pen testers, only delivered at open-source costs.

Simplify Pen Testing Management

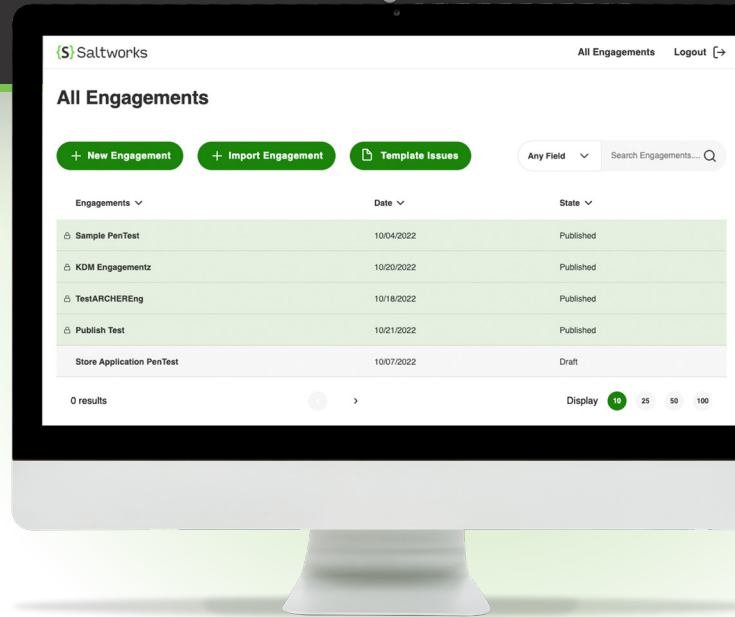

SaltMiner Community gives pen testers a way to manage their engagements and results drastically improving their efficiency and production. With SaltMiner Community, pen testers and other groups like developers who need to test applications can aggregate, visualize and report on their manual assessments using the same interface and engine as SaltMiner Enterprise. Not only does this give users the power of SaltMiner applied to manual assessments, it also provides a path to complete AppSec program visibility and management with SaltMiner Enterprise adoption.

Streamline Your Reporting

Pen testers spend too much time creating reports and finding ways to communicate results to their clients and customers in a consistent format.

With SaltMiner Community, pen testers and other users can:

- Reduce time spent compiling reports with centralized management and automated aggregation across multiple tests, testers, and tools.
- Deliver information in standardized reporting that eliminates formatting and tool conflicts with automated data normalization.
- Show trends and changes over time that help prove compliance.

Saltminer Community Lets You:

-  **Focus** on results, not data formatting and conflict resolution.
-  **Simplify** report management, creation, and delivery.
-  **Improve** actionable results communication and understanding.
-  **Standardize** results so that meanings are consistent across tests, testers, and tools.
-  **Increase** understanding of risk by applying business context to application security data.

Easily Track Results Across Different Tests, Testers, and Tools

SaltMiner Community functions as a Google Docs for pen testers by empowering multiple users to work on the same set of engagement results. And it supports results from the most used commercial and open source testing solutions with import functionality.

SaltMiner Community Edition

- **Delivers** the power of SaltMiner to manual penetration testing results management and reporting. It's enterprise functionality, only delivered at open-source costs.
- **Empowers** pen testers and other application security professionals to track their manual testing results and aggregate the results in ways no other freely available solution can match.
- **Standardizes** vulnerability definitions across tools so that 'critical' means the same thing no matter how it was identified.
- **Ensures** and enforces that pen testers follow a consistent practice.
- **Adds** business context to application security data that increases value and understanding.
